Rozalia Project Marine Debris Data Card for Community Cleanups

Thank you for working toward a clean and healthy ocean, lake, river or pond! This is a simplified version of our longer data card specifically designed for community cleanups. We believe that tracking marine debris is the key to preventing it. By uploading your data to the MARINE DEBRIS TRACKER App, you are helping all of us make informed changes, affect legislation and implement solutions locally on your waterfront, and globally.

Both the data card and App are very easy to use. If you have any questions, please contact us at data@rozaliaproject.org. The first time you submit cleanup data to the App, you will be asked to sign in. Note: we recommend logging and submitting a test item (under OTHER) so you can register before you do your first cleanup. After submitting, you will receive a validation email, you'll need to click the link to finish the registration process.

If you have multiple groups or people uploading data, ask everyone to use the same login and password - this will group all data from only your organization. We recommend using your organization (or family) name for the login and cleanocean for the password. You will also have the added bonus of us knowing who you are when you make it onto the top tracker list!

If you would like your data grouped in with Rozalia Project's, that works too, just use our login: **rozaliaproject** and password: **cleanocean**. Please note that if you use our login, when you download the data, you will get all of our data as well as your own!

You can use the Tracker App whether you are online or not, but you will need to be online to submit your data. Sometimes the paper card works better in the field, so in order to save paper as well as make data collection easier, we've condensed the data card onto one page. Just don't forget to collect the information below and log the totals into the App when connected!

Important - please fill out this information!

Type of cleanup (circle): underwater, shoreline, surface

Exact location cleaned: _____

Type of shoreline: (circle) sandy beach, rocky beach, park, dock/marina, other: _____

Distance cleaned: _____ Weather: _____

Start time: _____ End time: _____ State of the tide: _____

Recent weather or human events: _____

Most unusual item: _____

Your name: _____

Notes:

THANK YOU - YOUR CLEANUP AND DATA COLLECTION ARE MAKING A DIFFERENCE!
